	List of figures	xi
	List of tables and case studies	xiii
	About the author and acknowledgements	xiv
	Message to students	xv
	Message to lecturers	xvii
	<i>About the book</i>	xix
1	<i>Introduction: The domain of business information systems</i>	1
	What are business, information and systems all about?	2
	Why study business information systems?	2
	Organisational informatics	6
	Organisation and environment: an illustrative case	11
	Activity systems	13
	Information systems	14
	Information	15
	ICT systems	18
	The development process	20
	Operation, use, impact and evaluation	24
	eBusiness and eCommerce	25
	Planning and management	27
	Conclusion and key themes	27
	End of chapter features	28
	Part I Key concepts	29
2	<i>Organisations and systems</i>	31
	Learning outcomes and principles	31
	Introduction	32
	Organisation theory	32
	Systemics	37
	Systems	38
	Modelling systems	43
	Modelling problem situations and worldviews	45
	Control	47
	Feedback	54
	Organisation structure and organisation culture	59
	Process modelling	61
	Process design	64
	Summary and end-of-chapter features	66
3	<i>Data, information and knowledge</i>	71
	Learning outcomes and principles	71
	Introduction	72

	Signs and communication	72
	Empirics	77
	Syntactics	80
	Modelling data	80
	Semantics	83
	Pragmatics	84
	Modelling information	86
	Information, decision making and action	90
	Signs and systems	92
	Knowledge and modelling	93
	Summary and end-of-chapter features	93
4	Information systems	101
	Learning outcomes and principles	101
	Introduction	102
	Defining the concept of an information system	103
	The quality of information	104
	Modelling information systems	105
	Levels of infrastructure	106
	Activity systems infrastructure	109
	Back-end information systems infrastructure	110
	Front-end information systems infrastructure	118
	Information infrastructure	125
	Informatics infrastructure and organisations	125
	Summary and end-of-chapter features	127
	Part II Understanding ICT	131
5	Communication infrastructure	133
	Learning outcomes and principles	133
	Introduction	134
	Electronic delivery of goods and services	134
	Communication infrastructure	136
	The Internet	143
	The World Wide Web	151
	Transactional data	156
	Summary and end-of-chapter features	160
6	ICT systems infrastructure	165
	Learning outcomes and principles	165
	Introduction	166
	The technology of an ICT system	166
	Functionality of an ICT system	169
	The interface tier	172
	The business tier	176
	The data tier	178
	Integration	185
	Data security	188
	Summary and end-of-chapter features	193
	Part III Applying information systems to business	197
7	The business environment	199
	Learning outcomes and principles	199
	Introduction	200

The external environment of the organisation	200
Economic systems and actors	202
Economic relationships	203
Flows of value and transactions	205
The value chain	207
Supply chain, customer chain and community chain	208
Commerce	210
Communities and social capital	211
Control in economic systems	215
Business models and the value network	218
Value-chain, value-network and value-stream analysis	219
Summary and end-of-chapter features	223
8 <i>Electronic business and electronic commerce</i>	227
Learning outcomes and principles	227
Introduction	228
EBusiness	229
ECommerce	230
B2C eCommerce	232
B2B eCommerce	240
C2C eCommerce	243
EMarketing	246
The techniques of web-based eMarketing	248
EProcurement	250
Intra-business eBusiness and the partnership chain	253
Summary and end-of-chapter features	254
9 <i>Assessing the use and impact of information systems</i>	259
Learning outcomes and principles	259
Introduction	260
The worth of an information system	260
The context of use	262
Impact	269
Success and failure	277
Evaluation	283
Summary and end-of-chapter features	286
Part IV Managing information systems in business	291
10 <i>Planning, strategy and management</i>	293
Learning outcomes and principles	293
Introduction	294
Informatics planning	295
Strategy	302
Business motivation modelling	310
Informatics management	312
ICT governance	315
Summary and end-of-chapter features	316
11 <i>Services, projects and operations</i>	321
Learning outcomes and principles	321
Introduction	322
The informatics industry	322
Informatics careers	323

	The informatics service	324
	Project management	330
	PRINCE2	335
	Operations	337
	Summary and end-of-chapter features	342
12	Development	345
	Learning outcomes and principles	345
	Introduction	346
	The development process	346
	Approaches to information systems development	349
	Development organisation and information system	352
	Development toolkit	353
	Conception	356
	Developing a business case	356
	Analysis	360
	Design	364
	Construction	369
	Implementation	370
	Maintenance	371
	Summary and end-of-chapter features	374
13	Successful informatics practice	379
	Introduction	380
	The LASCAD failure and its turnaround	381
	The domain model	384
	The information system	385
	The use and impact of information systems	387
	The organisation	388
	The external environment	389
	The development process	390
	Informatics planning and management	390
	Operations and service	391
	Modern ambulance command and control	392
	Improving practice	394
	The future of informatics	394
	Conclusion	398
	References	399
	<i>Case studies</i>	401
	<i>Bibliography</i>	449
	<i>Glossary</i>	455
	<i>Index</i>	467

Figures

1.1	Elements of the field	4	3.5	The signification of bees	86
1.2	Reference disciplines	5	3.6	Information modelling constructs	88
1.3	Organisation, activity systems and environment	8	3.7	A simple information model	88
1.4	Information systems	8	3.8	Information model of a student information system	89
1.5	Data and information	9	3.9	Levels of management	91
1.6	ICT systems and infrastructure	9	3.10	Types of knowledge	93
1.7	Information systems development	10	3.11	An information model for the financial institution domain	95
1.8	Use and impact	10	3.12	Notation for generalisation	95
1.9	Planning, management and operations	11	3.13	Notation for aggregation	96
1.10	Goronwy Galvanising as a system	12	4.1	Information system modelling constructs	106
1.11	The activity system at Goronwy	14	4.2	An information systems model of the RAF early warning network	107
1.12	Sample delivery advice note	14	4.3	Levels of infrastructure	108
1.13	Sample job sheet	15	4.4	Activity systems infrastructure of a typical manufacturing organisation	110
1.14	Sample dispatch advice note	16	4.5	Information flows between core back-end information systems	112
1.15	The information system at Goronwy	16	4.6	Sales order processing	113
1.16	An information model for Goronwy Galvanising	17	4.7	Order entry	113
1.17	An ICT system, information system and activity system	19	4.8	Supply-side inventory management information system	114
1.18	Layers of an ICT system	21	4.9	Purchase order processing information system	115
1.19	Order lines data structure	21	4.10	Financial information system	116
1.20	Part of the proposed interface for the Goronwy ICT system	23	4.11	Payroll system	117
2.1	The process of structuration	36	4.12	Back-end and front-end information systems infrastructure	118
2.2	A dynamic system	39	4.13	Management information systems	120
2.3	System elements	39	4.14	Outbound logistics information system	121
2.4	Resolving a system hierarchy	41	4.15	Customer-facing information systems	122
2.5	Tesco as a system	42	4.16	Supplier-facing information systems	123
2.6	A rich picture of a university	46	4.17	Employee-facing information systems	124
2.7	Food retail as two activity systems	47	4.18	Part of a company's information infrastructure	125
2.8	Elements of a control process	52	5.1	ICT infrastructure	135
2.9	The key transformation	53	5.2	Data communication	136
2.10	Inputs and outputs	53	5.3	Access devices and communication channels	137
2.11	Adding control	54	5.4	A local area network	140
2.12	A sample conceptual model	54	5.5	Network topologies	141
2.13	System lags	56	5.6	The conventional telephone network	142
2.14	Single and double-loop feedback	57	5.7	TCP/IP layers	147
2.15	An organisation chart	60	5.8	Sub-networks and routers	149
2.16	Forms of organisational structure	60	5.9	Connection to an ISP	149
2.17	Process modelling constructs	62	5.10	Primary architecture of the Internet	150
2.18	Inventory management process	63	5.11	Components of the Web	152
2.19	Civil marriage process model	64	5.12	Electronic markets	160
3.1	Levels of semiotics	74			
3.2	The process of communication	76			
3.3	Plotting language elements against frequency of occurrence	79			
3.4	The meaning triangle	84			

6.1	Subsystems of a computer system	167	9.12	Development and use failure	279
6.2	Components of the CPU	168	9.13	Sauer's model of information systems failure	281
6.3	Layers of an ICT system	170	9.14	Information systems evaluation and the development process	284
6.4	Distributing functionality across the network	171			
6.5	Access via the three-tier architecture	173	10.1	The hierarchy of control	294
6.6	Typical structure of a website	174	10.2	Cash's taxonomy	295
6.7	Horizontal components of an intranet	176	10.3	Inputs into the informatics planning process	297
6.8	Internet, intranet and extranet	177	10.4	Three approaches to planning of strategy	298
6.9	Tables as data structures	180	10.5	The five forces model	300
6.10	A simple relational database	181	10.6	The relationship between organisation and informatics planning	306
6.11	An example of a distributed database system	183	10.7	Tiered access	307
6.12	A typical ERP package	187	10.8	University information model	308
6.13	The components of data security	189	10.9	University process model	309
6.14	Coding of messages	191	10.10	A process/information matrix for a university	309
6.15	Digital certificates	192	10.11	Elements of the BMM	311
			10.12	COBIT domains	316
7.1	The external environment of organisations	201	11.1	Traditional structure of the informatics service	325
7.2	Key economic actors	203	11.2	Processes of the informatics service	327
7.3	Actors and relationships in a market	204	11.3	The process of project management	330
7.4	Major transactions between buyer and seller	206	11.4	An activity-based plan	331
7.5	The value chain	208	11.5	Product-based planning	332
7.6	The supply chain	209	11.6	Forms of project organisation	333
7.7	The customer chain	209	11.7	System documentation and project documentation	334
7.8	Three value networks	210	11.8	Activity-based project control	334
7.9	Cash, credit and repeat commerce	211	11.9	The PRINCE2 process	336
7.10	Social networks	213	11.10	ICT services management	338
7.11	Intermediation, disintermediation and reintermediation	220			
7.12	The old payments process at Ford	222	12.1	The development process	347
			12.2	Activities of information system development	347
8.1	The domain of eBusiness	229	12.3	Approaches to information systems development	349
8.2	The customer chain	233	12.4	The linear model of development	351
8.3	Stages of B2C eCommerce systems	234	12.5	The iterative model of development	351
8.4	Information seeking and communication	234	12.6	The relationship between project management and information systems development	352
8.5	Marketing presence	235	12.7	The process of systems conception	356
8.6	Online catalogue	235	12.8	The process of systems analysis	361
8.7	Online ordering	236	12.9	A use case model	363
8.8	Online payment	237	12.10	The systems design process	365
8.9	Online delivery	238	12.11	Information models corresponding to distinct human activity systems for nursing	360
8.10	Customer relationship management	239	12.12	Systems construction	369
8.11	The supply chain	241	12.13	The configuration management process	373
8.12	Integration of B2B systems with the information systems infrastructure	242			
8.13	The conventional procurement process	251	13.1	The original activity system for ambulance dispatch	382
8.14	A model of an eProcurement process	252	13.2	The LASCAD information system	382
			13.3	An information model for the LASCAD system	383
9.1	The DeLone and McLean model	261	13.4	The domain model	385
9.2	The domains of functionality, usability and utility	261	13.5	An information system model for modern ambulance command and control	393
9.3	The domain of use	263			
9.4	Format, content and control	264	C.1	Representation of a quipu	436
9.5	Examples of questions from a user satisfaction questionnaire	268	C.2	Information model for the research information system	439
9.6	Dimensions of impact	269			
9.7	Efficacy, efficiency and effectiveness	271			
9.8	Productivity plotted against ICT spending	272			
9.9	Preconditions for electronic delivery of products and services	274			
9.10	Dimensions of failure	278			
9.11	Problem solving and problem setting	279
